

TANJIM AHMED

Junior DevOps Engineer

Mirpur, Dhaka, Bangladesh | 01300106033 | tanjimahmed450@gmail.com

LinkedIn: [linkedin.com/in/tanahmedd](https://www.linkedin.com/in/tanahmedd) | GitHub: github.com/tanahmееedsx

PROFESSIONAL SUMMARY

DevOps Intern at Springer Capital with hands-on experience shipping Dockerized applications through GitHub Actions CI/CD pipelines to AWS (EC2, ECS Fargate, ECR) and running them with health checks, logging and alerting. Comfortable debugging across the stack, from Security Groups and SSH to failing pipelines, and documents every failure and fix. Interested in DevOps, Cloud and SRE roles.

TECHNICAL SKILLS

Cloud & Containers: AWS (EC2, ECS Fargate, ECR, VPC, IAM, Load Balancers, Security Groups), Docker

CI/CD & Version Control: GitHub Actions (lint, test, security and deploy gates, email alerts), Git, GitHub, pull requests, merge conflict resolution, SSH authentication

Observability & Monitoring: Grafana Loki (stream and label-cardinality audits), cron-based system monitoring, uptime and health checks, Mattermost notifications

DevSecOps: GitHub secrets, secret scanning, CodeQL, npm audit, eslint-plugin-security, SSH hardening (ED25519 keys, key-only access)

Linux & Automation: Ubuntu, systemd, Bash, n8n workflows, webhooks, REST APIs, network troubleshooting (nc, curl)

Programming Languages: Python (FastAPI), JavaScript/Node.js, Go

PROFESSIONAL EXPERIENCE

DevOps Intern | Springer Capital | Remote, Chicago, USA

Aug 2026 - Present

- Built an event-driven intern quiz notification pipeline with n8n (Baserow form, webhook, field mapping, Mattermost) that automates quiz submission handling end to end.
- Evaluated n8n in an isolated staging environment: built and tested workflows for webhooks, HTTP requests, data transformation and credential handling, ran functional and persistence tests, and documented results and version/build limitations in GitHub.
- Audited Grafana Loki logging for high-cardinality labels (Jira DEV-290), documenting stream and query impact and the optimization requirements.
- Collaborate with engineers across different countries on automation and infrastructure tasks.

Junior Executive | SkyTech Solutions | Uttara, Dhaka

Nov 2025 - Feb 2026

- Handled inbound and outbound calls with California-based homeowners and followed up with prospects to support lead-to-deal conversion.

SELECTED PROJECTS

Incident Management & On-Call Tracker on AWS EC2 - github.com/tanahmееedsx/incident-management

- Deployed a MERN incident management app (built by my mentor; deployment and infrastructure by me) to AWS EC2 Ubuntu 24.04 with Security Groups, SSH key pairs and EC2 Instance Connect; MongoDB runs under systemd.
- Configured environment variables, seeded the database, and troubleshooted SSH timeouts, a pending kernel upgrade, processes dying after SSH disconnect and GitHub auth failures using nc, curl, rsync and SSH-key Git auth.

Docker to Production: Cloud Health Monitor - github.com/tanahmееedsx/cloud-health-monitor

- Built a real-time dashboard (Node.js, Express, Docker) tracking live CPU, memory and disk usage, with a URL uptime checker that reports response time and status code.
- GitHub Actions runs ESLint, Prettier, Jest (coverage threshold), a security scan, npm audit and a Docker build, blocks failures and emails pass/fail; green builds are pushed to Amazon ECR and rolled out to ECS Fargate.
- Fixed three production issues: 1,000+ CI errors from a committed AWS CLI folder, a Security Group rule blocking public traffic, and Fargate's changing public IP (moved to a stable ECS service URL).

Mini Todo API - Git-to-Deployment CI/CD - github.com/tanahmееedsx/mini-todo-api

- Built a FastAPI app with a pull-request Git workflow and a GitHub Actions pipeline for automated tests, dependency checks and security checks, with secrets kept out of the repository.
- Deployed to AWS EC2 as a systemd service; debugged multiple failed CI runs to a green pipeline and verified the live API through its endpoints.

Intern Pipeline Planning - Baserow, n8n, Mattermost - github.com/tanahmееedsx/intern-pipeline-planning

- Designed an event-driven workflow: a Baserow quiz submission triggers a webhook, n8n maps and transforms the fields, and a bot posts a structured result to Mattermost.
- Documented in the repository with a scoring script, answer-key notes and workflow screenshots.

CERTIFICATIONS & EDUCATION

DevOps and Cloud Engineering - bongoDev

B.Sc. in Computer Engineering - Bangladesh University of Business & Technology (BUBT), Dec 2021 - Dec 2025
